de nombreux skins pour les notes

<http://pnotes.sourceforge.net/?page=2>

avec des nouveautés :

- * Added search/replace capabilities (for all notes or for individual note).
- * Added docking to any side of screen (each note can be docked/undocked individually or all notes can be docked/undocked).
- * Added ability to randomize color of newly created skinless notes.
- * Added checking for new program version (automatically or manually).
- * Setting newly created note "on-top" is now optional.
- * Added options to hide/show toolbar on notes.
- * Formatting commands (like at note's toolbar) added to note popup menu under "Format" submenu.
- * Days interval added to "pester" schedule type.
- * Autosave will works only for changed notes.
- * Added relational notes positioning.
- * Added ability to add any info to skin (up to 255 characters) and displaying this info at skin preview window.
- * Common note's font sample is now drawn at skin preview window.
- * Added support for vertical skin's toolbars.
- * Bug fixed - tooltips were hidden for "on-top" notes.
- * Bug fixed - status bar of Control Panel was not renewed on delete/new.
- * Bug fixed - improper rolled notes resizing.
- * Bug fixed - on some machines menus display squares instead of TAB characters.
- * Bug fixed - command line switches -x, -xs didn't work.
- * Bug fixed - redrawing problem during fast user switching on XP machines.
