Nouvelle version de **RJ TextEd 5.0**

*Changelog:*

- Options
- Added a few new options.
- Save bookmarks: to save and restore bookmarks when the file is opened.
- Save read-only status: to save and restore the read-only status.
- Add tool items to both the quickbar and the editor toolbar.
- Tools can run in the background.
- Tool option: Save current file if modified.
- Wordwrap options: Wrap at window edge, wrap at right margin.
- Spellcheck
- Changed the dll and made it possible to add user defined words to the dictionary. You can edit those words in the Add-ons dialog.
- Also fixed a few small issues.
- Project menu
- Added a project menu.
- Syntax file options
- Added two new options for syntax files.
- OnlyHighlightInBlock=Yes|No - this is used in the CSS syntax to only highlight text within { ... } blocks.
- EndOpenBlockAt= - this is used in the JavaScript syntax to enable highlighting of regex modifiers.
- Ruler
- Made the ruler smaller. A click on the ruler will move the right margin to that position.
- In wordwrap mode, a click on the ruler will make the text wrapped at that position (right margin).
- Wordwrap
- Click on the ruler will move the right margin to that position and text will be wrapped at the new right margin.
- Customize toolbars
- Added new buttons to be used in the customization dialog.
- Search/replace
- Made some changes to enable search and replace in hex view and with binary files.
- Added detection of UTF-8 files w/o BOM in extended search.
- Install
- Changed the install creation software to InnoSetup. You should now be able to install in a multi user environment (several user accounts).
- Script function
- Added a new script function to direct the output of a running tool to a file (RunAppAndWaitF).
- Fixed a large number of issues.
