OpenedFilesView v1.10 (fr) free

de chez Nir Sofer <http://www.nirsoft.net/>

Citation :

OpenedFilesView displays the list of all opened files on your system. For each opened file, additional information is displayed: handle value, read/write/delete access, file position, the process that opened the file, and more...

Optionally, you can also close one or more opened files, or close the process that opened these files.
