Hi Bernard,

Thank you

- * Jalbum - done
- * 1AVShare - done
- * Audiograil - done
- * TreeDBNotes - done on disk (OptionsPro.ini)
- * Faststone Capture - done on disk (fsc.db)
- * TOWeb - not yet, very hard, protected and encrypted

Best regards

Maciej

Thank Maciej, I'll check.

In this post I would just point out that, for **ABBYY Fine Reader Pro**, recALL displays the content of the value "**ProductID**" instead of the content of the value "**RegKey**" of the registry key [HKEY_LOCAL_MACHINESOFTWAREMicrosoftWindowsCurrentVersionUninstallABBYY FineReader 5.0 Pro].

Moreover, for this software, recALL displays "Adobe_ABBYY Fine Reader 5.0 Pro" for the application name.

Best regards,

Bernard
