Nouvelle version de Winrar

32 bit : <http://www.rarlab.com/rar/wrar511fr.exe>

64 bit : <http://www.rarlab.com/rar/winrar-x64-511fr.exe>

Changements Version 5.11:

1. WinRAR can unpack TAR archives containing folders with pax extended headers. Previous versions failed to unpack them.
2. "Keep broken files" extraction option is supported for 7-Zip archives.
3. Bugs fixed:
 - a) WinRAR 5.10 did not set "hidden", "read-only" and "system" file attributes when unpacking ZIP archives;
 - b) WinRAR 5.10 failed to update self-extracting RAR archives containing nested ZIP archives stored without compression;
 - c) ZIP archive created with "Do not store paths" option included unnecessary empty name records for folders;
 - d) archived files could have 1 hour modification time error in Windows XP;
 - e) deleting a file in RAR5 solid archive containing files stored with -ver switch caused such files to lose version information;
 - f) black rectangles were displayed instead of toolbar buttons in 16- and 24- bit screen color modes and Windows custom text size larger than 100%.
