Non, pas tout malheureusement... Cela ne concerne que les utilisateurs de SSD Intel...

Citation du bulletin MS sur ce patch...

Known issues in this update

Symptom Workaround

When attempting to upgrade to the Windows 10 April 2018 Update, select devices with Intel SSD 600p Series or Intel SSD Pro 6000p Series may repeatedly enter a UEFI screen after restart or stop working.

We are working with OEM partners and Intel to identify and block devices with Intel SSD 600p Series or Intel SSD Pro 6000p Series from installing the April 2018 Update. If you have encountered this issue, follow the steps to reinstall the previous operating system (Windows 10, version 1709), and wait for the resolution before attempting to install the April 2018 Update again.

Microsoft is working on a resolution that will be provided in an upcoming release; after which, these devices will be able to install the April 2018 Update.
