v5.0.1002.276

Kernel upgraded to 102.0.5005.167

Refactor the new tab page and settings page

Refactoring small tabs (support persistence)

Refactored video download

Added blur function to the snipping tool

Add menu item "Open in new small tab"

Add shortcut key customization such as switching cursor browsing

Add option: Overwrite files with the same name by default when downloading

Add feature: Reload the unzipped extension

The download dialog allows you to edit the path directly

Screenshot shortcuts are registered as global hotkeys

The label list displays the label group and the small number

Multi-column bookmarks are modified to full-screen scrolling

Optimize custom .css injection logic

[BUG FIX] Video pop-ups may appear outside the visible area of the screen

[BUG FIX] Crashes may occur when the app window is closed

[BUG FIX] The temporary files generated by the installation package could not be cleaned up when exiting
