Thank you for this very positive feedback.

While SUMo was an "aged" product, based on technology from 2 decades ago, I'm confident that the developper's community will soon come with a better, more modern, future-proof alternative.

Of course I could quote one of the many good updaters on the market : UCheck, VulnDetect, PatchMyPC, WingetUI, UpdateHub, Chocolatey, Scoop and certainly more.

I hope you all enjoyed SUMo and other software over the past years.
